

Jan Čejka

Senior Software Architect / PHP Developer with DevOps background

Remote-first / freelance contract · Czech Republic
dev@jancejka.cz · github.com/Cuchulain · dev.jancejka.cz

Profile

Senior software architect and full-stack developer with 30+ years in IT. Focused on architecture, takeover, stabilization and long-term development of web, backend and integration systems. Strong PHP/Symfony/Nette background combined with DevOps, Docker, Linux, CI/CD and production operations.

I bring the most value where an existing system needs to be understood quickly, stabilized, improved and moved toward a sustainable architecture and delivery process.

Key strengths

- PHP/Symfony/Nette backend development and architecture.
- Takeover, stabilization and long-term development of existing systems.
- Docker/Linux infrastructure, CI/CD, deployment automation and operations.
- API integrations, data flows, messaging and database-backed applications.
- Technical leadership and communication between business and development teams.

Technologies

PHP 8.x, Symfony, Nette, Doctrine, REST API, PostgreSQL, MySQL/MariaDB, Redis, RabbitMQ, Kafka, Docker, Linux, CI/CD, Azure DevOps, GitHub Actions, Jenkins, Kubernetes, JavaScript, Tailwind CSS, React, Astro, Go, Python.

Experience

DevOps, Full-stack Developer & Cybersecurity Manager · Softopus

2024 - present

Server configuration, deployment automation and full-stack development across backend and frontend. Responsibility for cybersecurity, secure operations and infrastructure oversight.

Senior Developer & Team Leader · Stavario

2020 - 2022

Led a development team and worked on an ERP system and web applications. Responsible for architecture, backend development, infrastructure and migration to Microsoft Azure and Kubernetes.

Software Architect · Czech Television

2019

Designed architecture for a new platform for video processing and distribution, including integration architecture and coordination with the development team.

SW Architect & Senior Full-stack Developer · Czech News Center

2017 - 2018

Developed Facebook and Viber chatbots, worked on neural-network-based solutions, internal CMS development and backend/infrastructure technology adoption.

Senior Developer / Software Engineer / IT Specialist · custom development and IT projects

1993 - present

Long-term experience in custom software development, internal systems, database applications, integrations and Linux/Windows IT administration.

Selected projects

Sales and billing automation for digital content - WordPress plugin for order forms, invoicing, payment checks, online payments, subscription logic and automatic access control.

ERP platform and development team leadership - ERP development, small team leadership, architecture design and migration to Microsoft Azure and Kubernetes.

Video distribution platform architecture - architecture design for video processing and distribution platform with distributed system communication.

Chatbots and backend integration services - Facebook/Viber chatbots, internal CMS and backend services including messaging, data flows and integration logic.

Languages

Czech - native

English - good written communication; spoken English currently developing
